## 5-4 Videos Guide

## 5-4a

- Description of differential equation

## Exercises:

- Solve the differential equation.
- $y^{\prime}=3 x y$
- $\frac{d y}{d x}=x \sqrt{y}$

5-4b

- $\frac{d u}{d t}=\frac{1+t^{4}}{u t^{2}+u^{4} t^{2}}$
- $\frac{d z}{d t}+e^{t+z}=0$
- Find the solution of the differential equation that satisfies the given initial condition.
$\frac{d y}{d x}=\frac{x \sin x}{y}, \quad y(0)=-1$

5-4c

- Population growth model
- $P(t)=P(0) e^{k t}$, where $P(0)$ is the initial population and $k$ is the constant relative growth rate

5-4d
Exercise:

- Find the orthogonal trajectories of the family of curves. Use a graphing device to draw several members of each family on a common screen.

$$
\begin{aligned}
& y^{2}=k x^{3} \\
& \bigcirc \quad y=\frac{1}{x+k}
\end{aligned}
$$

5-4e

## Exercise:

- A tank contains 1000 L of pure water. Brine that contains 0.05 kg of salt per liter of water enters the tank at a rate of $5 \mathrm{~L} / \mathrm{min}$. Brine that contains 0.04 kg of salt per liter of water enters the tank at a rate of $10 \mathrm{~L} / \mathrm{min}$. The solution is kept thoroughly mixed and drains from the tank at a rate of $15 \mathrm{~L} / \mathrm{min}$. How much salt is in the tank (a) after $t$ minutes and (b) after one hour?
