Title:

4-step solving process

1. $4\left(y - \frac{1}{2}\right) - 2y = 6(5 - y)$

Check:

2. $5(x + 3) + 9 = -2(x - 2) - 1$

Check:

$$3. \frac{2}{3}y + \frac{1}{2}(y-5) = \frac{y+1}{4}$$

Check:

$$4. 0.36z - 0.5 = 0.16z + 0.3$$

Check:

$$5. 0.12x + 0.20(4-x) = 0.6$$

Check:
